GROWTH PROPOSAL

Get Found. Get Customers.

Prepared for A La Cart Charcuterie Co.

<https://alacartcharcuterieco.com> | June 25, 2026

Charcuterie boards, grazing tables, and mobile cart catering | Lawrence, Kansas

CURRENT VISIBILITY
MODERATE

At a glance. A La Cart Charcuterie Co. has a strength most local businesses would envy: its Google Business Profile ranks **#1 in the Lawrence map pack** at a perfect **5.0 stars**, and the map pack is how most local catering customers choose. The gap is everywhere else a new customer looks. The website is a single, image-heavy page that Google and AI engines cannot read, so it reaches the first page of Google for only **4 of 10** real local searches, and it is absent from the Kansas City metro searches competitors are winning. AI answer engines can reach the site but find too little to confidently recommend it (**61 of 100**). Weighed across all three surfaces, the blended visibility index lands at **68 of 100**. This proposal lays out how we turn a strong reputation into a business that is found, trusted, and chosen across the whole region.

WHERE THINGS STAND

Executive Summary

A La Cart Charcuterie Co. is a Lawrence, Kansas based maker of grazing tables, charcuterie boards, cups, boxes, and mobile cart and trailer catering. In a little over a year, Rebecca has built a 5.0 star reputation and the #1 spot in the Lawrence map pack, almost entirely by word of mouth. The goal now is to grow into the higher-value weddings, grazing tables, and Kansas City metro work the business is ready for.

The audit shows exactly where that growth is being left on the table. The Google Business Profile is excellent, but the website is a single, image-heavy page that gives Google and AI engines almost nothing to read. As a result the site reaches Google's first page for only 4 of 10 real local searches, and it is invisible for the Kansas City metro searches, grazing tables, weddings, and delivery, that competitors like Graze and Gather KC and Forks N Chill are winning. Measured against six comparable boutique caterers, A La Cart ranks 4 of 7 on local-search coverage.

We audited the live site and the public listings, and we have already built three website redesign directions around the brand. The findings below are measured, not guessed. The plan turns a strong local reputation into a business that shows up everywhere a customer searches, reads as the premium choice, and never drops an inquiry.

YOUR NUMBERS TODAY

The Audit, In Plain Terms

Each number below was measured directly against the live site and the public listings. Together they explain why a 5.0 star reputation is not yet turning into the weddings, grazing tables, and Kansas City bookings the business wants.

Google Business Profile		91/100
AI Discovery (GEO)		61/100
Traditional Search (SEO)		51/100
Local searches on page one		40/100
Homepage On-Page Health		100/100

THE DETAIL

Measured Results

What we measured	Result	What it means
Google Business Profile	91/100	Excellent. #1 in the Lawrence map pack at 5.0 stars, the surface most local customers use to choose a caterer.
AI discovery score	61/100	Foundation. AI engines can reach the site but find too little to confidently recommend it.
Traditional search score	51/100	The gap. A single image-heavy page gives Google very little text to rank.
Local searches on page one	4 of 10	Reaches Google's first page for 4 of 10 real local searches, at an average position of about 8.
Google reviews	5.0 / 6	Perfect rating, but light volume. The easiest place a competitor can pull ahead in the map pack.
Position vs local peers	4 of 7	Comparable boutique caterers are found for materially more local searches.
Homepage on-page health	100/100	Technically clean, but a single image-led page with almost no readable text.

WHAT IS HOLDING YOU BACK

Where Customers Are Slipping Away

These are the specific places where ready-to-book customers are searching, getting close, and then slipping away before they reach A La Cart.

CRITICAL

The website is a single page that search cannot read

The site is one long, image-heavy scrolling page. It looks beautiful, but Google and AI engines have almost no text to understand or rank, so the business reaches Google's first page for only 4 of 10 real local searches. This single issue is the biggest brake on growth, and it is entirely fixable.

CRITICAL

Invisible across the Kansas City metro

For the Kansas City searches that matter most, grazing table Kansas City, wedding charcuterie Kansas City, and charcuterie delivery Kansas City, the business does not appear, while competitors like Graze and Gather KC sit at #1. These are exactly the higher-value bookings the business wants, and right now they are going to someone else.

HIGH

Quiet where new customers now look

When someone asks ChatGPT, Google's AI answer box, or Perplexity for the best charcuterie or grazing caterer near them, A La Cart does not come back as a confident recommendation. The crawlers can reach the site, but it lacks the AI-readable files, structured identity, and written detail that let an assistant name and recommend the business.

HIGH

Review volume is the one soft spot in a strong profile

The Google profile is rated a perfect 5.0, but on only 6 reviews, where competitors carry 20 to 50. Review count is the single easiest place a competitor can pull ahead in the map pack, and it is the cheapest, highest-impact lever the business controls.

MEDIUM

Ranking 4 of 7 against local peers

Measured against six comparable boutique charcuterie and grazing caterers, A La Cart sits at 4 of 7 on local-search coverage. The reputation is there, but several peers are found for materially more of the searches a customer types. The opportunity is to widen the lead, not to build from zero.

MEDIUM

No service or service-area pages

There are no dedicated pages for grazing tables, weddings, the cart, or for the towns served, Lawrence, Overland Park, Topeka, and the rest. Those are exactly the pages that would rank for the searches customers type, and a single homepage cannot carry them.

MEDIUM

The homepage gives search and AI little to work with

The page has thin text, one internal link, and images with no labels, so Google writes its own description and AI cannot tell what the photos show. These are fast signal fixes that make the brand easier to rank and easier for AI to cite.

YOUR ROADMAP

The Plan To Get You Found and to Grow Your Business

The work is delivered in two parts. Phase 1 is the one-time build that rebuilds the single-page site into a real multi-page site, brings the reviews onto the page, fixes the inquiry capture, and gives Google and AI engines everything they need to find, understand, and recommend A La Cart. Phase 2 is the ongoing monthly retainer that compounds the result: it grows the reviews, widens the lead against the peer set, and keeps the brand visible and improving every month.

Phase 1: The Build (one-time)

A single, defined build that rebuilds the site around the services and the towns served, and makes it recommendable to Google and AI.

- 1 Rebuild the single-page site into a real multi-page site, on A La Cart's current GoDaddy hosting, in the chosen design direction *(customers see exactly what to book)*
- 2 Add real, structured text content with service pages for grazing tables, boards, cups and boxes, the cart, and the trailer *(search engines finally have something to rank)*
- 3 Build dedicated service-area pages for Lawrence and the Kansas City metro, Overland Park, Olathe, Topeka, and the rest *(show up for the towns you want to serve)*
- 4 Bring the 5.0 star reviews from Google, Yelp, and Facebook onto the site as social proof
- 5 Add a working request-a-quote form so no inquiry is lost
- 6 Add AI-readable files and business, service, and review structured data *(AI engines can identify and recommend the business)*
- 7 Write the homepage search description, add text labels to the photos, and the other SEO and GEO fixes from the Visibility Audit
- 8 Publish a charcuterie knowledge base, twelve articles tuned for search and AI answers, grazing tables, weddings, cart rental, and how much to order *(ranks and pre-sells the higher-value events)*
- 9 Target the Kansas City metro searches the site is missing, grazing tables, weddings, delivery, and cart rental

Phase 2: Ongoing Growth (monthly retainer)

A monthly program that turns the new foundation into compounding visibility, reviews, and bookings. This is where the lead widens and the brand gets chosen.

- 1 Run a simple, repeatable review program: ask every happy customer for a Google review and respond to each, growing well past 6 *(defends and grows the #1 map-pack spot)*
- 2 Manage the Google Business Profile on an ongoing basis as requested: fresh photos of new events, posts, Q and A, and accuracy
- 3 Manage the blog: publish new search-and-AI-tuned posts every month, and expand the service and service-area pages *(ranks and pre-sells bookings)*
- 4 Set up and manage a paid ad campaign that puts A La Cart in front of active local demand, with a recommended starting media budget of \$250 per month to test the waters, paid to the ad platforms and separate from the retainer *(bookings on tap while the organic lead widens)*

- 5 Manage AI discovery (GEO): track ChatGPT, Claude, Perplexity, and Google's AI box for the questions customers ask, and tune content and structured data to win the named recommendation (*become the answer, not just a link*)
- 6 Manage search (SEO): monitor rankings across the local terms and target new Kansas City searches each month to move past 4 of 7 against peers
- 7 Build authority through local citations and listings that widen the lead over time
- 8 Add a live AI chatbot assistant that answers routine questions, pricing, areas served, and availability, and captures the inquiry, available with the monthly retainer (*a 24/7 first responder for inbound interest*)
- 9 Optionally add a simple online ordering option for boxes and cups, so individual orders book themselves (*turns everyday orders into direct online sales*)
- 10 Monitor site speed, security, and uptime on the host, and keep the platform current
- 11 Deliver a monthly report on rankings, AI mentions, inquiries, reviews, and traffic, so the value is always visible

WHAT YOU GET

Services In This Engagement

Eagle Point Publishing is a Pacific Northwest AI-enabled marketing automation firm. The services that apply to this engagement are drawn from our six core offerings and matched to what the audit found.

Conversion Web Design

A premium multi-page site built around grazing tables, weddings, the cart, and the towns you serve, with clear calls to action and a request-a-quote flow, replacing the single image page.

Generative Engine Optimization

AI-readable files, structured identity, and content shaped so ChatGPT, Claude, Perplexity, and Google's AI box can understand, name, and recommend A La Cart.

Search Engine Optimization

Turn the thin single page into real ranking pages: service and service-area pages, homepage signals, and the Kansas City searches you are missing.

Google Business Places

Defend and grow the #1 map-pack position with a steady review program, fresh event photos, and posts.

Content and Authority

A charcuterie knowledge base, twelve articles tuned for search and AI answers, that ranks and pre-sells the higher-value weddings and grazing tables.

Lead Capture and AI Chatbot

A reliable request-a-quote form, built as part of the launch, plus a live AI chatbot that answers routine questions and captures the inquiry. The chatbot is added with the monthly retainer.

Online Ordering (optional)

A simple ordering option for boxes and cups so everyday orders book themselves, built and managed as part of the monthly retainer and able to start when you are ready.

Paid Ad Management

A managed local ad campaign that puts A La Cart in front of active demand. We recommend a starting media budget of \$250 per month to test the waters, paid to the ad platforms and separate from the retainer.

HOW THIS WORKS

Engagement And Investment

The engagement is delivered as a defined project, with an optional ongoing relationship after launch. It comes in the two parts below, the build and the monthly growth retainer, which can be taken together or in sequence.

The one-time build, which covers the design, content, structured-data, reviews-on-site, and inquiry-capture work needed to rebuild and relaunch the site including the service and service-area pages, is provided at no cost to get started. After launch, the monthly retainer covers ongoing SEO, GEO, and Google Business Profile management, blog management with new posts every month, an active review program, a managed ad campaign, authority building, and monthly reporting, so the lead the audit identified keeps widening. The recommended ad media budget, \$250 per month to start, is paid directly to the ad platforms and is separate from the retainer.

Investment figures are reviewed with you directly on this call, matched to the scope you choose. Success is defined the way it was on our call: more of the right customers, especially the higher-value weddings and grazing tables, finding A La Cart, trusting it, and booking.

Phase	What it covers	Investment
Build (one-time)	Rebuilt multi-page site, service and service-area pages, content, GEO and SEO setup, reviews on site, lead capture, launch	\$0, no cost
Growth (monthly)	Ongoing SEO, GEO, and Google Business management, blog with new posts, review program, managed ad campaign, authority building, reporting	\$500 / month

Recommended ad media budget: \$250 per month to start, paid directly to the ad platforms, separate from the retainer. This proposal is valid for 30 days.

THE MATH

What One New Customer Is Worth

Over the first six months	Amount
One-time build	\$0, no cost
Growth retainer, 6 months at \$500	\$3,000
Recommended ad spend, 6 months at \$250	\$1,500
Total invested	\$4,500

A typical larger event runs \$1,200 to \$1,500, and weddings and grazing tables run well above that. Weighed against just a handful of additional bookings over six months, especially the higher-value weddings and Kansas City work the plan targets, the investment pays for itself, and everything after that is profit.

WHERE WE GO NEXT

Next Steps

- 1 Proposal review call today, Thursday, June 25, 3:00 PM Pacific (5:00 PM Central)
- 2 Walk the three website design directions together and choose one
- 3 Confirm the scope and the build timeline
- 4 A La Cart grants access to the GoDaddy site and the Google Business Profile so we can launch and tune
- 5 We begin the build

The bottom line. The reputation is already there, a perfect 5.0 and #1 in Lawrence. The work ahead is turning that into a site search and AI can read, that ranks across Lawrence and Kansas City, and that never drops an inquiry, so the higher-value weddings and grazing tables start finding you. Let us build it.

Eagle Point Publishing LLC is a Pacific Northwest AI-enabled marketing automation firm. This proposal reflects findings from the discovery call and an automated audit of the live site, and is intended as a working plan to refine together.

TO MOVE FORWARD

Acceptance

To begin, sign below. The one-time build is provided at no cost, and the monthly growth retainer is \$500 per month, billed monthly and able to be paused as the work requires. The recommended ad media budget is separate and paid directly to the ad platforms.

Phase	What it covers	Investment
Build (one-time)	Rebuilt multi-page site, service and service-area pages, content, GEO and SEO setup, reviews on site, lead capture, launch	\$0, no cost
Growth (monthly)	Ongoing SEO, GEO, and Google Business management, blog with new posts, review program, managed ad campaign, authority building, reporting	\$500 / month

Recommended ad media budget: \$250 per month to start, paid directly to the ad platforms, separate from the retainer. This proposal is valid for 30 days.
